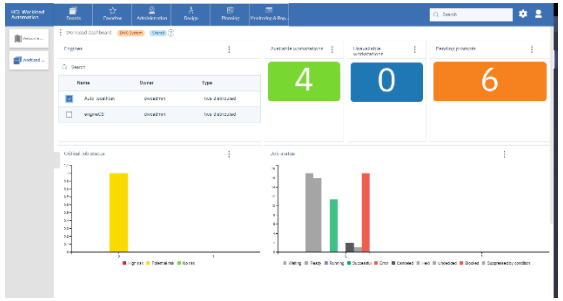
Workload Automation V9.5 – What's NEW !

GA March 15th

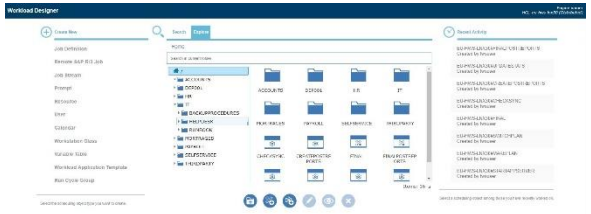
Enable business control



Make real-time data-driven decisions with the new dashboards

- Machine-Learning algorithms for predictive estimation of job duration
- New Live Dashboard experience - easy to customize with modern look and feel
- Built-in WA widgets for monitoring and support for external data sources from any REST API
- Improved usability on WA reports

Empower your LOB users



Workload Folders for greater business agility and enforced security at LOB level

- Organize jobs and job streams in a hierarchy of folders
- Enable business-oriented triggering and monitoring of activities related to jobs and job streams
- Associate access control lists to individual folders to manage the security of client jobs and job streams

Get the best of containers with WA

Deploy all WA components on containers and manage containerized applications

- Reduce dramatically installation and time by deploying WA on Docker containers
- Easy upgrade and downgrade
- Reduced prerequisite software stack
- Manage application on containers with WA agents from the same or a separate container

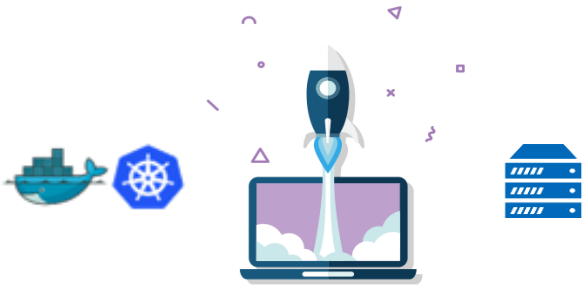
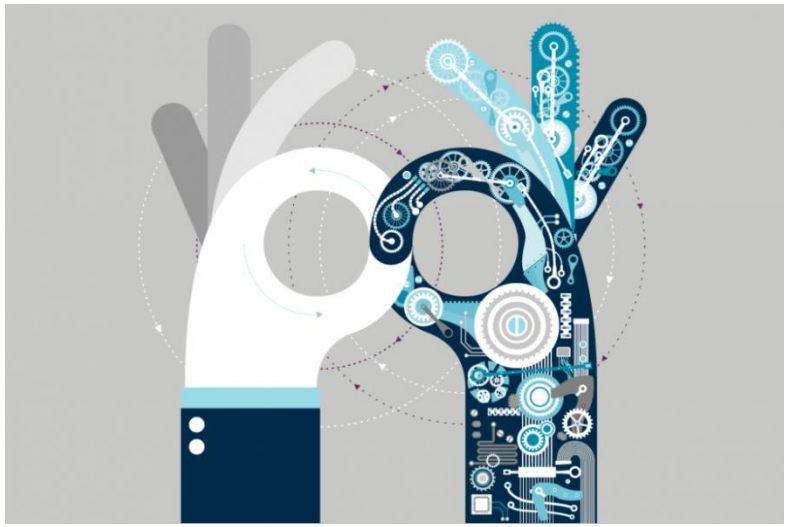
Workload Automation V9.5 Wows – Get the best of containers with WA

Deploy a full Workload Automation infrastructure in less than 10 minutes

- Easy deployment, upgrades and downgrades with only **3** containers
- Master, UI (Dynamic Workload Console) and dynamic agents available in containers strongly reducing TCO
- Easy upgrade to containerized WA from traditional architecture





Manage containerized applications

- Manage application on containers with WA agents from the same or a separate container
- WA Agents in containers can orchestrate containers via APIs or kubectl CLI
